COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in Data Science, Machine Learning, Fraud Analytics, and Risk Analytics opportunities within your organization. I hold a B.Sc. in Computer Science from the University of Mumbai and combine hands-on machine learning experience with professional experience in financial crime, fraud investigation, AML/KYC, and transaction disputes.

In my current role as a Fraud & Dispute Investigation Analyst at Teleperformance, I investigate card-fraud and transaction-dispute cases, analyze transaction and customer information, assess supporting evidence, apply risk-based judgment, and initiate eligible VISA chargeback processes. Previously, as an AML/KYC Analyst at Firstsource, I worked across customer due diligence, transaction/activity indicators, PEP and sanctions screening, real-time alerts, and risk-based investigations.

Alongside my domain experience, I have built end-to-end machine learning projects in Python. My primary project is a Fraud Detection & Transaction Risk Scoring System using PAYSIM, where I implemented chronological data splitting, leakage-safe historical behavioural features, imbalance-aware training, Random Forest classification, transaction-level risk scoring, SHAP explainability, investigation guidance, human-in-the-loop decisions, and Flask deployment. I have also developed a content-based Movie Recommendation System and an NLP-based SMS Spam Classifier.

I am particularly interested in opportunities where data science and machine learning can be applied to fraud prevention, financial crime, risk analytics, transaction monitoring, or broader data-driven decision-making. My combination of domain knowledge and technical project experience enables me to understand both the analytical model and the operational context in which its outputs are used.

I would welcome the opportunity to discuss how my experience could contribute to your team. Thank you for your time and consideration.

Sincerely,

MOHD SAHIL ANSARI
