Dear Hiring Manager,

I am writing to express my interest in Data Science, Machine Learning, Fraud Analytics and Risk Analytics opportunities in your organization. I hold a B.Sc. in Computer Science from the University of Mumbai and combine hands-on machine learning project experience with professional experience in financial crime, fraud investigation, AML/KYC and transaction disputes.

In my current role as a Fraud & Dispute Investigation Analyst at Teleperformance, I investigate card-fraud and transaction-dispute cases, analyze transaction and customer information, assess supporting evidence, apply risk-based judgment and initiate eligible Visa chargebacks. Previously, as an AML/KYC Analyst at Firstsource, I worked across customer due diligence, transaction and activity review, PEP and sanctions screening, real-time alerts and risk-based investigations.

Alongside my domain experience, I have built machine learning projects in Python. My main project is a Fraud Detection & Transaction Risk Scoring System using the synthetic PAYSim dataset, where I used chronological data splitting, historical behavioural features, imbalance-aware training, a Random Forest classifier, transaction-level risk scoring, SHAP explainability and a Flask interface. I have also built a content-based Movie Recommendation System and an NLP-based SMS Spam Classifier.

I am particularly interested in roles where data science and machine learning can be applied to fraud prevention, financial crime, risk analytics or transaction monitoring. My domain background helps me understand both the analytical model and the operational context in which its output is used.

I would welcome the opportunity to discuss how my experience could contribute to your team. Thank you for your time and consideration.

Sincerely,

Mohd Sahil Ansari
